

Negar Aliabadi '14PH

Hi! I trained and worked in internal medicine at Bellevue Hospital, followed by NYP-Columbia, where I also received my masters in epidemiology from The Mailman School of Public Health, before entering the world of global public health through CDC. At CDC I worked on various outbreaks (meningitis, Ebola, acute flaccid myelitis) domestically and globally, as well as on strengthening global immunization programs. I worked closely with health departments, Ministries of Health, WHO and other partners through this work. I have continued my love of vaccine related work by transitioning to Vaccine Research and Development at Pfizer where I currently work on vaccine clinical trials. I am excited to join the alumni board of Mailman to engage with public health students and share my experiences in this very exciting field!
